How to Use P2P Function on Door Station
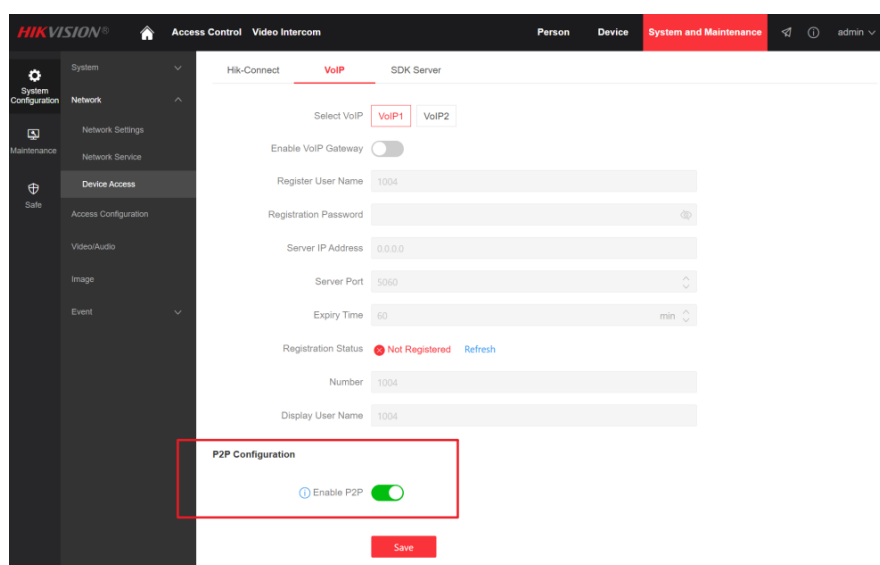

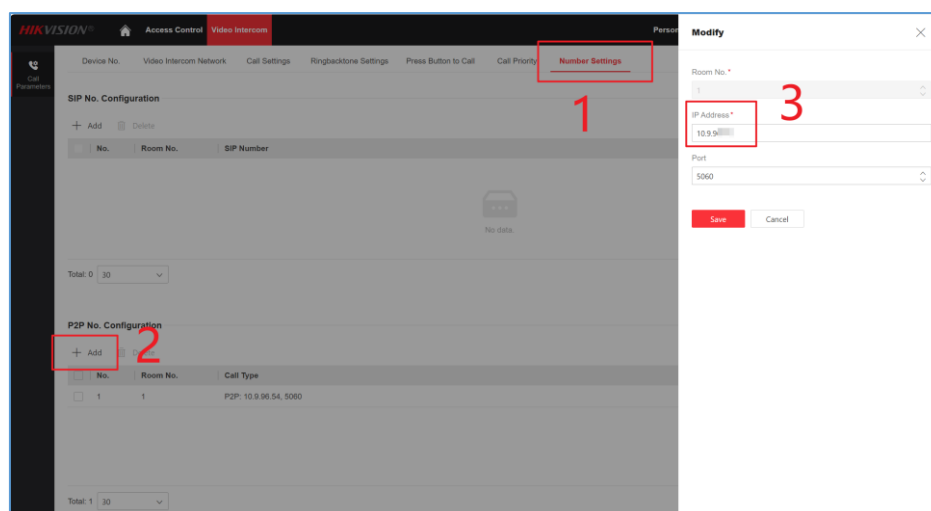

Preparation

1. A sip phone (or other client) supports P2P calling function, we take Hikvision DS-KP6000-HE1 sip phone as example.
2. A door station supports P2P calling function, we take Hikvision DS-KD8003-IME1(B) V3.7.1 door station for example.
3. Make sure the 2 devices are in the same LAN network.

How to Use P2P Function on Door Station
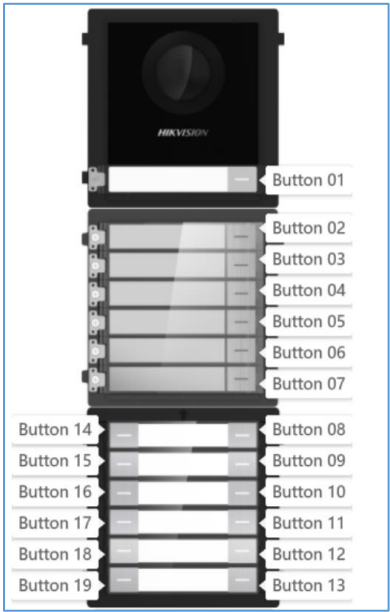

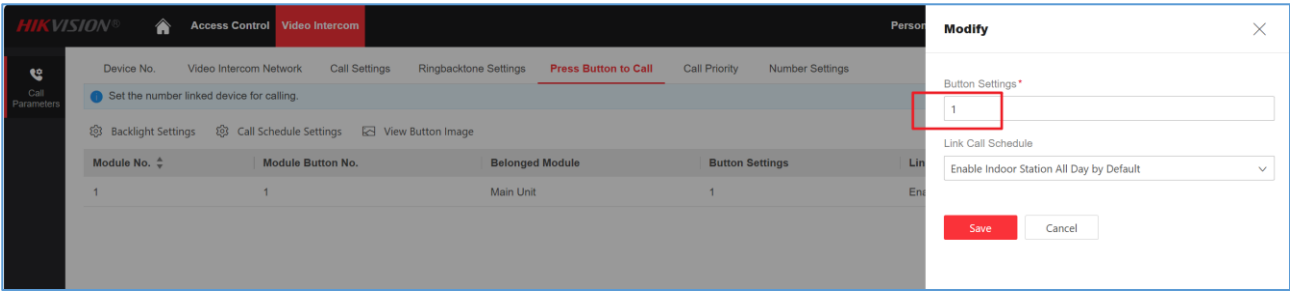

1. Enable P2P from door station side

2. Link a room number to the SIP phone's ip address

3. (Optional) Link the call button to any empty room No. if the nametag module is used.
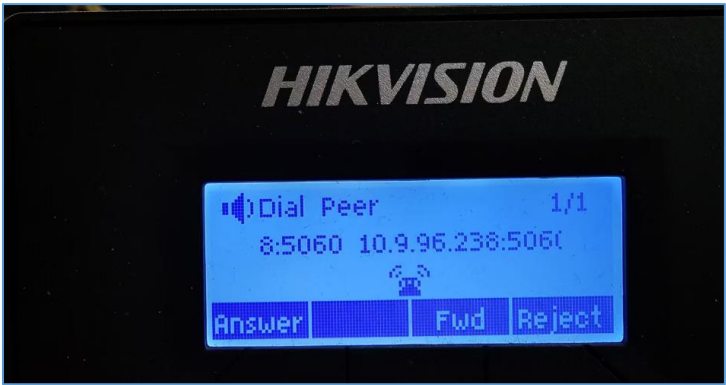

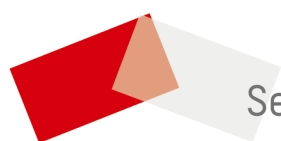

4. Please contact with your SIP phone provider and check how to enable P2P calling and other related settings from SIP phone side, here we take Hikvision DS-KP6000-HE1 sip phone as example. And **cancel** the option "**Enable Strict UA Match**"

5. Press call button from door station side, then the SIP phone will ring.
